

OBJECTIVE

Python is a popular, general-purpose, multi-paradigm, open-source, scripting language. It is designed to emphasize code readability and has a clean syntax with high level data types. It is well-suited for interactive work and quick prototyping, yet it is powerful enough for writing large applications. Python has a large number of available and well-written modules for everything from abstract syntax trees to ZIP file manipulation and Data Analytics.

The purpose of this workshop is to enhance the knowledge of students and faculty in the field of Python Programming. This workshop will help the students and faculty to learn Python in industry perspective and make them to do real world web applications and Data Analytics.
