

Check-For-Plag(CFP)

Check-For-Plag(CFP) is a response to powerful, galvanizing call to action by Honorable prime Minister of India Shri Narendra Modi to India's citizens and business leaders to MAKE IN INDIA initiative. CFP is brain child of information industry veterans, infused with latest robust technology, committed to serve the nation with affordable solutions to enhance the quality of research.

With increasing dependability on internet for information, there is tremendous growth in cases of plagiarism (deliberate or erroneous) globally. CFP is an anti Plagiarism software developed to curb the serious problem of plagiarism faced by publishers/ societies, researchers and institutions worldwide. The technology used and regularly enhanced content covered makes this solution realistic and acceptable by users globally.

Anti Plagiarism Software

Check-For-Plag: A unique MAKE IN INDIA Initiative to curb plagiarism globally.

Check-For-Plag delivers a solution developed to meet the specific demands of academic publishers in order to:

Ensure due diligence and prevent academic misconduct before it occurs.

Reduce time spent investigating and adjudicating misconduct cases.

Protect the reputation of institution, researcher or advisor, writer and publisher.

Publishers

Check-For-Plag is designed for speed and ease-of-use so that academic researchers can quickly upload, check and examine documents in just a few minutes.

Check-For-Plag is accessed through a web-based interface and requires little to no training.

Check-For-Plag helps researchers share documents and collaborate as groups.

Most scientific, technical and medical researchers and authors are exceptionally skilled in a specific field. When it comes to writing a manuscript or thesis, they are honed into their area of study, sifting through a massive amount of data, experimentation and prior research to examine a new idea or theory.

No matter how exceptional a piece of research material is, if it does not meet the proper requirements of a journal, it may not even be considered for publication.

Check-For-Plag for Publishers

Service offers publishers a way to compare documents against the largest comparison database of scientific, technical and medical content.

More than 182 Million published research articles, conference proceedings and e-books have been indexed into the Check-For-Plag database by leading publishers, making it the largest comparison database.
